

The Light
Connection System

The Light Connection System

Linect® is a universal connection system for recessed luminaires. All luminaires fitted with a Linect® interface can be connected to a plug-in connector system from various manufacturers. The Linect® system is available with different types of functionality like on/off, dimming and emergency. The aim is to significantly reduce both delivery and installation times.

Connecting a luminaire with Linect®

With Linect®, every recessed luminaire fits several plug-in connector systems. The components for the Linect® plug-in connection system for light installations include:

- Linect® Mains Supply Terminals in the luminaire
- Linect® T-Plug-in Connector

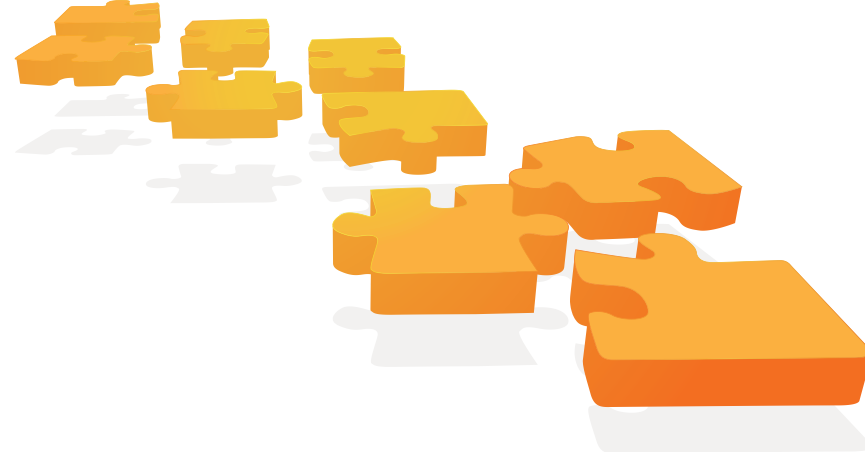

A high quality universal wiring system that makes installation simple on site

- Plug and play: Luminaires with Linect® connectors are very quick to install
- The connection can be installed or removed just as quickly. Defective lights can be hot swapped.
- Luminaires fitted with Linect® terminals can also be wired conventionally without having to use the built-in plug system

A high quality universal system from which specifiers can benefit in many ways

- Component compatibility raises the level of freedom of planning and design success and certainty. The installation system is totally independent of the luminaires that are selected.
- This simplifies all phases in a project.
- With Linect® luminaires, the wiring installation cost can be made supplier independent - for both conventional wiring and connection to different plug-in connector systems.

Our recessed luminaires are now available with Linect® quick connection

Just a selection is shown. For a complete overview please visit our web site.

Glamox D20 LED

Glamox D20 LED is a functional and flexible downlight delivered as one complete unit. The downlight is available in different shapes, sizes, lumen packages and different colour temperatures. Glamox D20 LED is available as dimmable, and with a large range of decorative accessories

Glamox D20

Glamox D20 is a functional and flexible downlight delivered as one complete unit. The downlight is available in different sizes and shapes. Advanced reflector technology provides efficient energy usage and several optics and decorative accessories to make it easy to adapt the solution to different environments. A unique system is developed where the ballast can be changed without dismantling the downlight. D20 is delivered with a dust cover that protects the reflector during the building period.

Travel

Travel is a functional downlight with a metal body, available in different sizes and shapes including a very efficient wallwasher and a compact mini version. Advanced reflector technology provides efficient energy usage and several optics and decorative accessories, which makes it easy to adapt the solution to different environments.

Glamox C10-R

A recessed luminaire for T5 lamp with clean and seamless front housing in white painted steel. The luminaire is designed to lay-in onto T-bar ceilings. Available in different optics with focus on comfort and easy maintenance. The one piece housing gives a clean surface without visible joints to ensure a discreet integration in the ceiling.

Glamox C20-R

A recessed fitting that fits most common ceiling systems. The luminaire can be mounted from the underside, or as a lay-in onto T-bar ceilings. Components are hidden behind two hinged side cover panels for easy maintenance. Available with different optics with focus on comfortable working environments.

Glamox C20-RL

Recessed fitting for modular or plasterboard ceilings, with a luminaire housing in white painted sturdy steel. The C20-RL is available for mounting individually or in rows on panelled/slatted ceilings. Available with several different optics.

Glamox C30 R, RO, RIT, RIC

The Glamox C30 family of recessed luminaires offers an optimal balance between direct and diffused light. A large lighting surface is combined with effective central optics. The even light distribution in combination with focused downlight provides comfortable working light with maximum effect and minimum glare. Glamox C30 comes in a wide variety of models with different designs and optics as well as mounting options for different types of ceilings.

Glamox C51-R

A quality luminaire for sports halls. Designed for recessed mounting in plasterboard ceilings. The optic is using an efficient reflector material for high LOR and it is designed and tested especially for use in demanding sportshall environments.

Glamox C61-R

A recessed luminaire that is IP54 from underneath, for mounting in a sealed ceiling system or plasterboard ceilings. Diffuser in acrylic. The Glamox C61-R is easy to install, quick and easy to clean and has simple maintenance.

Minerva

A recessed luminaire which brings direct and indirect light distribution together into one luminaire. By combining direct and indirect light Minerva contributes to an ergonomic and energy efficient environment in schools, offices etc. Available in two different variants.

Modul

A series of recessed luminaires that combine function, performance and design. Available in different optics, shapes and functionality. The wide range of variants makes Modul suitable for many applications and environments.

Glamox A51-R

An architectural recessed circular fixture with an opal glass diffuser which creates a decorative background illumination onto the ceiling. Available in three different sizes R280, R430 and R530.
